

Slurrytec

Understanding slurry®

Understanding slurry means designing the process to suit the properties of the slurry

Slurry Thickening and Filtration Solutions

- Slurry characterisation
- Lab and Pilot Studies
- Design data generation
- Equipment sizing
- Dewatering circuit design
- Site audits
- Technical adjudication of dewatering equipment tenders
- Thickener control

Slurry De-sliming Solutions

The Kravi® is a unique process developed in-house for improving metallurgical recovery of valuable product through removal of slimes/clay fraction. Applications include:

- Ultrafine coal recovery
- Tailings re-treatment
- Pre-processing cleaning step

Water Conditioning

ClariVie44® is a water conditioning reagent developed in-house for the improvement of overflow clarity and reducing flocculant costs particularly in problematic clay slurries or any other dispersive slurries.
