

# DRY SITE. COMPLIANT WATER.

With Keller's dewatering and groundwater treatment services

Dewatering of contaminated sites and groundwater treatment go hand in hand. Keller has more than 100 years of construction dewatering experience and 30 years of groundwater treatment experience, offering clients complete water handling capabilities from one contractor. With Keller addressing these critical dual aspects, your project can be more cost-effective and efficient.

Streamline your projects with Keller's dewatering and water treatment services

# Dewatering and groundwater treatment services

## The whole range of treatment processes

Keller provides treatment solutions to fit a variety of applications and requirements and can design a solution for your specific needs. Water treatment applications include:

- TSS/turbidity control
- Metals precipitation
- Oil/water separation
- Multi-phase extraction
- Carbon absorption
- Media absorption
- pH adjustment
- Vapor treatment

## Equipment rentals

We also provide operation and maintenance for our dewatering and treatment systems as well as equipment rentals.

- Pumps
- Media Vessels
- Bag Filters
- Sand Filters
- Clarifiers
- Chemical Injection

## Benefits & advantages of Keller dewatering and water treatment

- Systems flexible enough to accommodate variable waste streams
- Systems tailored to your specific needs
- Built-in system redundancy so that media change outs and system modifications happen without ever stopping the real work
- Experienced technicians and system operators
- Commitment to safety
- Permanent and mobile and modular systems
- Turn-key performance
